

SAAFLOK MSP Pricing Recommendation

2026 Market Review & Recommended Pricing Strategy

Prepared for: SAAFLOK Computers Service LLC

Website reviewed: msp.saaflok.com

Review date: September 6, 2026

Executive Recommendation

SAAFLOK's current \$69 / \$89 / \$119 per-device pricing is competitive and should not be broadly reduced. The primary recommendation is to protect profitability by tightening service scope, removing unlimited-device exposure from Professional, and introducing clear device caps and/or custom pricing above the standard tiers.

Plan	Current	Recommended	Recommendation
Starter	\$69/device	\$69/device	Keep; tighten scope
Essentials	\$89/device	\$89/device	Keep; make Most Popular
Professional	\$119/device	\$119/device	Keep; cap at 50 devices
Professional Plus	—	\$139–\$149/device	Optional new premium tier
Enterprise	Custom	Custom	Keep custom SLA

Current Website Findings

The live pricing page currently lists Starter at \$69/device/month for up to 10 devices, Essentials at \$89/device/month for up to 25 devices, Professional at \$119/device/month with unlimited devices, and Enterprise as custom. Starter currently includes onsite visits, backup management and after-hours support. Professional includes unlimited devices, monthly onsite support, advanced security/EDR, disaster recovery planning and after-hours/weekend support.

The biggest commercial risk is Professional's unlimited-device promise. Labor, support tickets, monitoring, patching, security events and onsite work increase as the client's device count increases. A fixed per-device price cannot safely remain unlimited unless there is a very strong fair-use restriction.

Market Comparison

Current 2026 benchmarks show substantial variation because scope differs. One June 2026 survey of 412 MSPs reported fully managed IT averaging \$145/user/month, with a typical \$110–\$185 range; it also reported that 63% of providers primarily use per-user pricing versus 24% per-device. A September 2026 published-price dataset reported a \$49.99 median per-device monthly rate across providers publishing per-device pricing. Other 2026 guides place fully managed per-device services broadly around \$50–\$150/device/month.

This means SAAFLOK's \$69–\$119/device range is market-competitive, particularly because the higher tiers include security, backup, onsite and strategic services.

Recommended Packaging

Starter — \$69/device/month

Keep the price. Position it as the entry-level remote managed IT plan. Include monitoring, patching, business-hours remote helpdesk, endpoint protection and monthly reporting. Move routine onsite work, backup management and after-hours support to higher tiers or paid add-ons.

Essentials — \$89/device/month

Keep the price and make this the clear 'Most Popular' plan. Include backup verification, network/firewall monitoring, quarterly onsite review, vendor coordination and priority support.

Professional — \$119/device/month

Keep the price but remove 'unlimited devices.' Recommended scope: up to 50 devices. Include EDR, disaster recovery planning, monthly onsite support, after-hours/weekend support and IT strategy.

Professional Plus — \$139–\$149/device/month

Optional premium tier for customers needing stronger security, more onsite coverage, extended support and executive/strategic services. Use 51+ devices as a natural trigger for custom pricing.

Enterprise — Custom

Keep custom pricing for multi-site, compliance-heavy, large-fleet and complex infrastructure customers. Use formal SLA, onboarding assessment and negotiated scope.

Commercial Rules to Add

1. Add a monthly minimum for each plan.
2. Define exactly what counts as a managed device.
3. State that servers, firewalls, network equipment and specialty systems may have separate pricing.
4. Define onsite visit duration and service-area limits.
5. Separate projects from recurring managed services.
6. Add a formal onboarding/assessment fee or clearly scoped onboarding process.
7. Add fair-use language for after-hours and emergency support.
8. State response targets separately from resolution targets.

Suggested Minimums

Starter	5-device minimum	\$345/month minimum
Essentials	10-device minimum	\$890/month minimum
Professional	15-device minimum	\$1,785/month minimum
Professional Plus	20-device minimum	\$2,980/month minimum at \$149

Per-User Pricing Opportunity

The market is increasingly moving toward per-user pricing because employees commonly use multiple devices. SAAFLOK can continue using per-device pricing for small businesses and shared-device environments while testing a per-user option for larger customers. A future professional per-user package in the approximate \$125–\$150/user/month range would be defensible if it includes full device coverage, Microsoft 365 administration, security and support.

Website Messaging Recommendation

Replace the current generic benchmark language with a more current statement: “Managed IT pricing varies by support coverage, cybersecurity, backup, onsite service and SLA requirements. SAAFLOK packages predictable monthly managed IT services with transparent pricing and clearly defined service levels.”

Final Assessment

Overall pricing grade: 8.5/10. SAAFLOK is not materially overpriced. The opportunity is to improve packaging and protect margins rather than lower prices. The single highest-priority change is to eliminate the unlimited-device promise on Professional.
